### **Sea Lamprey Control planned for the St. Marys River**

U.S. Fish and Wildlife Service and Fisheries and Oceans Canada personnel will apply lampricides to sections of the St. Marys River (Chippewa County) to kill sea lamprey larvae burrowed in the stream bottom. Applications will be conducted between XXXXX and XXXXX, 2024, in accordance with State of XXXXX permits. Application dates are tentative and may be changed based upon local weather or stream conditions near the time of treatment.

Sea lamprey larvae live in certain Great Lakes tributaries and transform to parasitic juveniles that migrate to the Great Lakes and kill fish. Failure to kill sea lamprey larvae in streams would result in significant damage to the Great Lakes fishery.

The U. S. Environmental Protection Agency and Health Canada Pest Management Regulatory Agency have reviewed human health and environmental safety data for lampricides and in 2003 concluded that the lampricides (Lampricide and Bayluscide) pose no unreasonable risk to the general population and the environment when applied at concentrations necessary to control larval sea lampreys. However, as with any pesticide, the public is advised to use discretion and minimize unnecessary exposure. Lampricides are selectively toxic to sea lampreys, but a few fish, insect, and broadleaf plants are sensitive. Persons confining bait fish or other organisms in the St. Marys River are advised to use an alternate water source because lampricides may cause mortality among aquatic organisms stressed by crowding and handling. Agricultural irrigation must be suspended for 24 hours, during and following treatment.

The program is contracted through the Great Lakes Fishery Commission to the U.S. Fish and Wildlife Service and Fisheries and Oceans Canada. The Commission initiated chemical control

of sea lampreys in 1958. Since that time, the highly successful program has contributed significantly to the maintenance of the \$7 billion Great Lakes sport and commercial fisheries.

For additional information in the U.S. call 1-800-472-9212 and in Canada call 1-800-553-9091. TTY users may reach the Marquette or Ludington Biological Stations through the Michigan State Relay Service at 1-800-649-3777.
